

# ES Comandor

*A variety of short vegetation suitable for sowing as a cover crop!*

## Variety characteristics

- › Very early variety (Group 000)
- › Cover crop with high yield potential
- › The variety is sensitive to the active substance pendimethalin
- › Plant height: low
- › Hilum color: yellow
- › Flower color: violet
- › High pod shattering tolerance

## Disease resistance

### › White rot:

izrazito niska	niska	srednja	visoka	izrazito visoka
----------------	-------	---------	--------	-----------------

### › Bacteriosis:

izrazito niska	niska	srednja	visoka	izrazito visoka
----------------	-------	---------	--------	-----------------

### › Viruses:

izrazito niska	niska	srednja	visoka	izrazito visoka
----------------	-------	---------	--------	-----------------

## Agro-technical characteristics

- › Optimum sowing time: due to the short growing season of around 100 days, it can be sown until the end of June
- › Recommended sowing density:
  - › - 70 - 75 grains/m<sup>2</sup> in dry tillage conditions
  - › - 60 - 65 grains/m<sup>2</sup> under irrigation conditions
- › Recommended row spacing: 24 - 30 cm
- › Time of full ripening of the lentil crop: from the end of September to the beginning of October

## Quality characteristics

- › Protein content: 40 - 42%
- › Oil content: 19 - 21%
